Build a website with below functions using vue-cli, import needed Vue packages as you want.

1. An admin console page with below layout

2. Add two entries in the left menu bar
   - Dashboard (the default active item)
   - List

3. Add business logic to above pages
   Dashboard
   Display simple text in Main section
   List
   Implement Create/Read/Update/Delete functions
      1. Create button on the top, with ability to open a dialog to insert data
      2. A table with all inserted data displayed
      3. Each data record has 'Edit', 'Delete' buttons
         Click 'Edit' -> Dialog popup with editable function, support save data and cancel
   edit function
         Click 'Delete' -> Delete current record

4. Implement **one of** the below directives
   - Permission Control
   We have **['user.list', 'user.list.add', 'user.list.delete', 'user.list.update]** permissions
     1. All users have 'user.list' permission.
     2. Only users with target privilege can toggle the Create/Edit/Delete button, otherwise these buttons will be hidden.
   - Add draggable function on existed pop-up dialog, so that the position of it can be customized

Some nice-to-have functions:
1. Support theme toggle
2. Support responsive design

Please upload your source codes (excludes node_modules) to your personal github (make this repo public), or zip them, and mail your work to wei.d@binance.us.
